

Industrial monitors with full flexibility

The NRN line monitors are manufactured by a leading European company with more than 12 years of experience in design and manufacturing of industrial and marine monitors. This ensures meeting the demands of today's professional applications. The most facilities for design and engineering are in-house.

Display- enhancement (optical bonding) and touch screen integration (lamination) are also part of the in-house activities. This brings full flexibility in the features needed for a given application. With business partners for industrial computing most projects with touch displays can be realized, even with integrated PC (Panel-PC).

With the new series of monitors, the NRN-Line, special attention has been taken regarding robustness in a stylish housing. All models within the NRN-line are based on the same concept chassis and can be configured to your needs and all options are available on each model. Below you can find some examples

- Switching between VGA, DVI-D, HDMI and PAL/NTSC inputs
- Metal bezel or Full-glass version
- Projected capacitive (PCAP) or Resistive touchscreen
- High brightness version (1000 cd/m²)
- Transflective enhancement
- Deep dimming backlight with front or external control
- Optical Bonding
- Wide range DC input
- Stainless steel front on the Panelmount units
- Rugged desk stand for VESA mount units available
- Further customized version on request

The OSD standard is setup via rubber buttons at the rear side of the monitor. The extended versions however can have an additional source select button via capacitive sensor integrated in the glass. The versions with a decoder at the front surface, can have full control of source-select, dimming, on/off and OSD through just this one control.

If you have any question or special request, feel free to ask our experts!

IEC60945

As an option, the panel mount (extended) glass models can be supplied with IEC 60945 certification. In this configuration not all options are available.
