

Slow Scan LCD Monitors

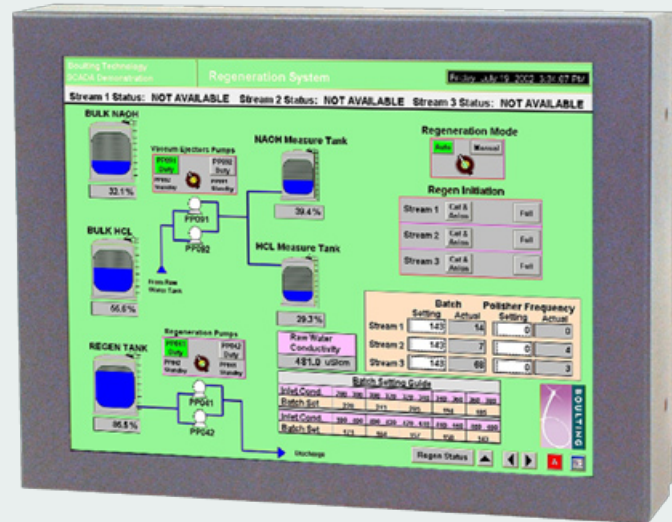

The 29LM101E71UN series of LCD monitor heads have been designed for industrial applications in the control field, and other users that require a compact VGA monitor with a small footprint and a high brightness display with good viewing angles. The rugged, metal construction of the monitor ensures exceptional stability, especially important when touch-screen operation is necessary. VESA fixings for Ergo Arm Mounting are on the rear cover.

The KME A/D board has been designed to accept a wide range of signal timings from 15kHz up to VGA standard, including CGA & EGA legacy signals. Set-up controls for finetuning of the display are located at the rear of the monitor. Once set, no further adjustments should be required, and the last setting is stored in memory.

Features

- High Brightness/High Contrast TFT panel
- 15 to 60kHz Horizontal Scanning range
- 40 to 100 Hz Vertical Scanning range
- Programmable for non-standard Legacy signals
- Rear OSD Controls for maximum versatility
- Optional Touchscreen Integration
